Expandable Remote I/O

Acromag's Busworks® NT Series
lets you add expansion I/O
modules for a high-density,
cost-efficient remote I/O solution

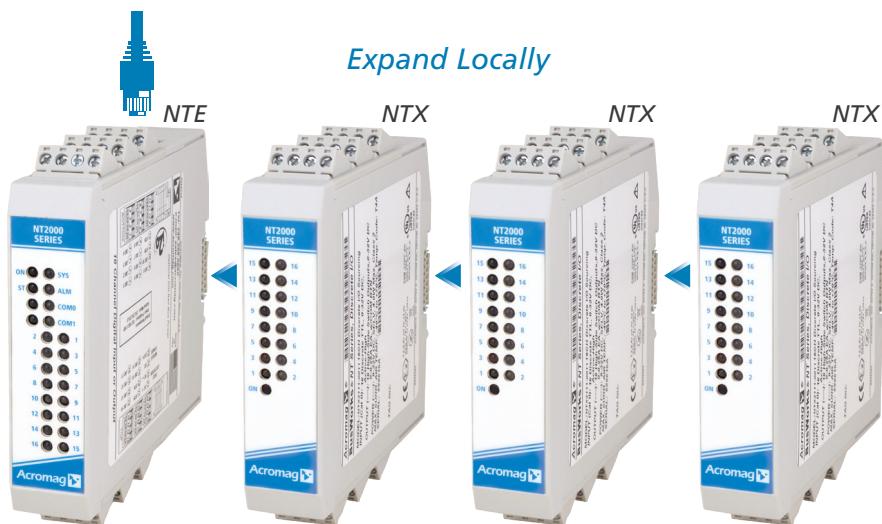

Base unit NTE Ethernet models handle the network communication and interface up to 16 analog or digital I/O channels for remote monitoring or control applications. NTX Expansion models provide a cost-effective way to add a mix of I/O signal types under a single IP address.

Multi-protocol support

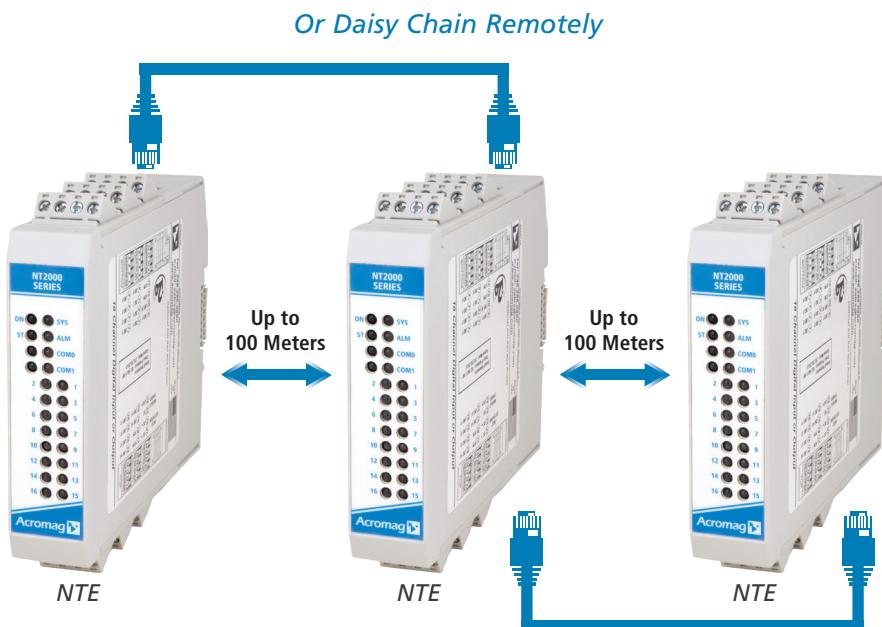

The NTE Ethernet I/O modules are pre-programmed to support Modbus/TCP, Ethernet/IP* and Profinet* protocols. Just select which is to be used. Modules also support direct i2o® peer-to-peer communication without a master.

- Integrated I/O expansion bus
- Up to 64 I/O channels per port
- Mix analog, digital, and temperature I/O on one port
- i2o peer-to-peer or multicast communications
- Rugged design, -40 to 70°C
- Hazardous location approvals

Link up to three NTX expansion I/O modules to an NTE Ethernet I/O module over the integrated DIN rail I/O bus connectors.

Connect NTE Ethernet I/O modules with a daisy-chain topology using the internal dual-port switch to simplify network cabling.

I/O Support	Input Modules	Output Modules
DC Current	8 differential or 16 single-ended channels	8 output channels
DC Voltage	8 differential or 16 single-ended channels	8 output channels
Thermocouple	8 channels of Type J, K, T, R, S, B, E, N, or mV	
RTD/Resistance	4 channels PT100, Cu10, 0-500 ohms.	
Digital I/O	16 channels	16 channels
Relays, Contact Closures	6 channels 120/240V AC	6 normally open 5A relays

Ethernet-based Configuration

Easy setup from anywhere with a web browser

NTE Ethernet I/O modules have a built-in web server for convenient configuration without installing any software. Several web pages lead you through the options to set your IP addresses, protocol, and I/O parameters. A diagnostics page lets you monitor I/O values from your PC, tablet, or smartphone.

Advanced features for IIoT and local control logic functions

The configuration pages will help you quickly setup advanced capabilities such as peer-to-peer communication, conditional logic computation, and alarm output.

- Peer-to-peer communication
- Counter/timers
- IF/THEN/ELSE logic*
- Alarm output*
- RESTful APIs*
- OPC-UA server*
- MQTT support*
- Field-upgradeable
